

LIT: Global Leader in Anti-Counterfeiting & Traceability Solutions

Fighting illicit trade, securing official documents, and protecting trusted brands

LIT Secure Voucher Solutions

Fraud-Resistant • Traceable • Instantly Verifiable

Overview

LIT's Security Voucher is designed to provide integrated solution of visible and invisible security features for a wide range of products, documents, and assets.

Security features include multilayer secure codes, variable data and artwork, linked visible and invisible security features, proprietary taggants and customized application.

The Challenge Features

Product counterfeiting and diversion cause financial losses and damage to brand reputation, erode consumer trust, and pose serious safety risks. Common visual elements like barcodes, holograms, or QR codes can be copied or cloned relatively easily.

LIT addresses these issues with **multi-layered security codes** and **instant authentication**, helping brand owners protect their products across the entire supply chain from manufacturing to the point of sale.

Key Features

Latent Image Security Layer

Embedded into each voucher is a unique image visible only with a low-cost polarizer, making forgery virtually impossible.

Customizable Format and Size

Vouchers can be issued as paper tickets, plastic cards, labels, or booklets adapted to your operational workflow.

Tamper Evident Substrates

Designed to show clear signs of alteration or duplication attempts.

Optional Serial Numbering and Barcoding

Supports manual or automated tracking for accountability and program auditing.

Traceability-Ready Design

Easily integrates with LIT's optional tracking systems for centralized monitoring, redemption control, and fraud analytics.

LIT: Global Leader in Anti-Counterfeiting & Traceability Solutions

Fighting illicit trade, securing official documents, and protecting trusted brands

Use Cases

- Government welfare and food aid programs
- Fuel and energy subsidies
- Utility and tax credits
- Corporate loyalty and promotional vouchers
- NGO or donor-issued entitlement programs

Benefits

- ☒ Blocks forgery, duplication, and reprinting
- ☒ Enables instant offline verification in the field
- ☒ Builds trust among recipients, distributors, and regulators
- ☒ Adaptable to low-infrastructure environments
- ☒ Protects budgets and brand reputation

Implementation and Support

LIT offers full-service support for secure voucher programs, including:

- Secure design, printing, and packaging
- Polarizer authentication tools and training
- Workflow consultation for distribution and redemption
- Optional integration with digital verification platforms
